

Smart Lights App

Task List

Kevin Wiltschnig, Auer Thomas

February 3, 2023

1 Introduction

The prototype "Smart Lights App" is a minimal version to test overall user experience regarding the work flow of the application. Visit the website at

<https://kenggbua.github.io>

to test the prototype. Please refer to the following 3 tasks and note that for the sake of testing, some values and entities are automatically created to speed up the process.

1.1 Task 1 – Add a room

For the first task, add a "Bed room" to your "Home rooms" overview.

1.2 Task 2 – Add a lamp and a setting

Route to the newly created room and add a smart setting and connect a lamp.

1.3 Task 3 – Add a sensor

Thirdly, route back to the overview "Home rooms". Now add a motion sensor or an audio sensor and select all possible detectors and conditions aswell as actions.

2 Feedback

- a.) Do you think it was difficult to operate the Prototype demo?
- b.) Were the symbols and their effects comprehensible? Do you think any symbol was out of place?
- c.) For the third task, which type of sensor did you add and why?
